

Capability Statement

Human centered design. We build a deep empathy with our clients by promoting an open communications process. This process allows for a **collaborative** space allowing the team members to innovative organically ensuring the solution delivered meets the exact need of the client in an iterative process.

Software Development Practices. Our Coding practices promote **modernization** by providing our clients with developers who utilize varied languages for software development for both public and private entities. We foster a business model that embraces the **SAFe v5 Agile Framework**, allowing for continuous and more efficient delivery of value on a regular and predictable schedule.

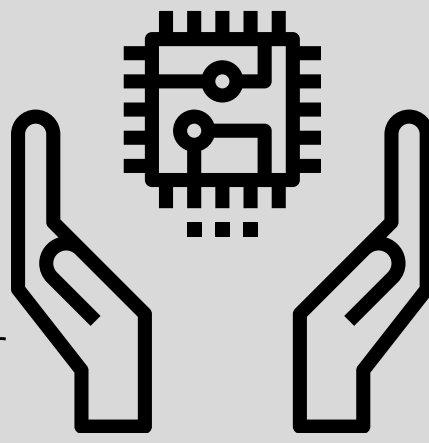

Networks and Partnerships. We link **Federal, State, Local Government, and Private Industry** to expert resources for solving challenges by providing a consultant referral, exemplifying the **communities-of-practice model** that features practitioners engaging in informal **peer-to-peer collaboration** to solve problems, share ideas, and develop relationships.

Organizational Assessments. We conduct **reviews** of Federal, State, Local Government, and private entities determining opportunities for **increased efficiency, operational effectiveness, and innovative approaches** of doing business within technology.

Operational Services. We provide services which build **fluidity** and **accuracy** of your business processes. **We use enterprise frameworks** such as ISO9001, SAFe v5, and ITIL v4 to strategically align, organize, and execute your operations. From software development, to enterprise services (NOC/SOC/Service Desk) our team provides industry best practices in **CyberSecurity Operations** provides reassurance for the security of your organization's information by **identifying, investigating** and **resolving** threats and potential cyber attacks.

Design Thinking Research

Through data analysis and constant feedback, we are able to be proactive and provide custom solutions for clients. This creates an individualized design for each of our client programs addressing the nuances of a specific business.

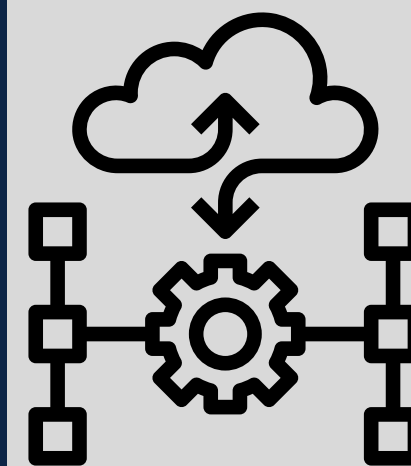

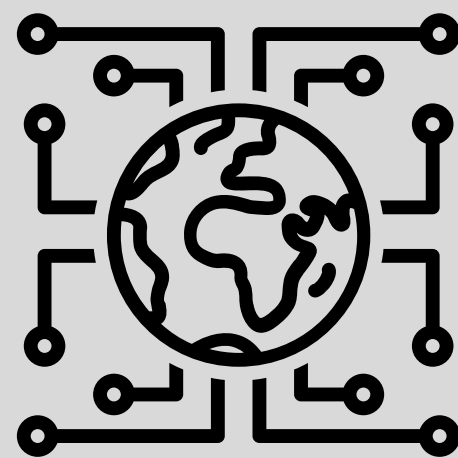

Scaled Agile Framework

Using SAFe Agile Methodologies we are able to transform silos into value streams, creating transparency via our iterative approach to development and operations.

Data

We use our Deep and Machine Learning capabilities to create and maintain neural network links within structured and unstructured data sets, enabling business intelligence within the enterprise to harness the power of your data.

Cloud computing

We provide and advise cloud-based services and can align them with your business needs. Thus providing ubiquitous computing capabilities for your operations and data-anytime, anywhere, on any device.
